LexiConn Knowledgebase

How to use your shared SSL

 You can find the secure URL to access the shared SSL certificate by logging in to your account manager and clicking on "Account Information". Your secure URL will be at the very bottom of the list. If you like, you can E-Mail us and we can provide you with the URL.
 If you would like your own secure certificate (i.e. https://www.your_domain.com), visit http://www.lexiconn.com/services/secure_certificates.html for details or contact us and we would be glad to provide you with the information.
