Overview of Scripts

CGI scripts are used to create dynamic content on your web site. Several CGI scripts are included with your account and can be found in your cgi-bin directory.

Scripts included with most accounts and their functions:

formmail.cgi - E-Mails data to you from a form on your web site

formmail.php - E-Mails data to you from a form on your web site and offers an optional CAPTCHA code as form validation.

Wordpress - Full-featured blog software phpBB - One of the best-known forum applications on the web

Discus - Advanced discussion board

Guestbook - Allows visitors to your site to include comments

Swish-E Search - Allows you to add a search box to your site to make navigation easier
