Why do the links in the Domain Manager keep taking me back to the login screen?

1. Login to the Domain Manager with the domain name you want to move into another profile.
2. "Manage Profile" and then "Change Ownership of Domain".
3. On the next screen type the username and password of the target profile to which you are trying to move this domain.
4. Mark the "Move to existing profile" box and type one of the domain names of the target profile.
5. Click "Change Profile" (requires that the cookie function is enabled in your browser).
