LexiConn Knowledgebase

How to locate the auth code for transferring your domain

If you are transferring your domain away from LexiConn to a different registrar, you will need to obtain your domain auth code. This code is required for all domain transfers. Once logged into the Domain Manager, you can obtain this by clicking on the Organization link. On this screen, you will see a box called 'Domain Auth Code'. If you are transferring your domain to our registry, you would need to obtain the code from your current registrar.
