Overview of Analog

Analog is a www log file analysis program. The unique thing about analog is you decide which reports to generate, what time frame they cover, how many hits, and the look of the report.

To use it, go to: http://www.your_domain.com/logs/analogform.html (simply replacing your_domain.com with your own domain name).

Then choose the options you want and press "Produce Statistics" button at the bottom of the page and Analog will create a customized summary of accesses.
