

How do I use or learn more about custom templates?

Custom Templates in ShopSite give you the most flexibility for creating the look you desire, while coupling the power and ease of use of ShopSite. Once a template is in place, if you add a product, change a product, or delete a product, all you need to do is press the "Publish" button and your changes are made to your store.

Custom Templates consist of 2 parts: The Page Template, and the Product Template. The Product Template defines how a product will be displayed in a store page. The Page Template is what defines how the entire page will look, where links will be, where products will be placed, etc...

You can find a great tutorial on getting started with Custom Templates by going to <http://www.shopsite.com/help/> and clicking the appropriate link which corresponds to the version of ShopSite which you are running. From there, expand the "Customizing ShopSite" menu by clicking the + symbol (this will be located in a list on the left-hand side of the page). Next, expand the "Change the Look of Your Store" menu, then expand the "Create Custom Templates" menu. Inside this section is a tutorial of ShopSite templates as well as a list of all of the custom template tags.

You can also find video tutorials on many back office operations at:
