

## LexiConn Knowledgebase

### **Adding link directly to reviews only**

`$(function(){ $(".Box").css("display","none"); });` To have a link on a page with multiple products that can take a customer to the detailed reviews for that product without displaying the reviews themselves, simply use the link:

`http://www.your_domain.com/reviews/review.php/full/YOURSKU`

If you want the page to open in a new window, use code similar to:

`<a target="_blank" href="http://www.your_domain.com/reviews/review.php/full/YOURSKU">Review</a>`

replacing YOURSKU with the sku of the product and replacing your\_domain.com with your domain name. This will allow you to have a short text link or small graphic linking to the full review for a product.
