How do I manage resizing images

$(function(){ $(".Box").css("display","none"); }); You can configure ShopSite to resize your images to up to three additional sizes.
To configure image resizing properties, go to Images-->Configure in your back office:
Under "Image Layout Defaults" your can configure the following properties:
Referenced as: - enter the name you would like to use to refer to the original image you upload to ShopSite (or leave it as 'Original' if that's the label you would like to use).
Image size: - Check the checkbox and enter a value here if you need to resize your original image when you upload it. You can specifiy a max width and height so that it is only resized if it is oversized.
Border: - set the border size of your image in pixels or set to '0' for no border.
Image spacing: - set the vertical and horizontal spacing around your image here, or set to '0' to eliminate any spacing.
Other attributes: - enter any other attributes that might be relevant to your images here. Bear in mind that whatever attributes you enter here will be applied to all images that are uploaded to ShopSite. Some common image attributes might include: title="", rel="", alt="" or even inline css - style="".
