How Do I Embed a Real Media Video File in one of My Pages?

$(function(){ $(".Box").css("display","none"); }); A Real Media video file (.rm) can be embedded in your page directly using the following code: (replace all attribute values shown in braces with your own values)

Embed a Real Media File <OBJECT id='rvocx' classid='clsid:CFCDAA03-8BE4-11cf-B84B-0020AFBBCCFA' width="[width]" height="[height]"> <param name='src' value="[URL_of_your_media_file.rm]"> <param name='autostart' value="[true|false]"> <param name='controls' value="[imagewindow|other]"> <param name='console' value="[video|(other-media-type)]"> <param name='loop' value="[true|false]"> <EMBED src="[URL_of_your_media_file.rm]" width="[width]" height="[height]" loop="[true|false]" type="audio/x-pn-realaudio-plugin" controls="[imagewindow|other]" console="[video|(other-media-type)]" autostart="[true|false]"> </EMBED> </OBJECT>

Here is an example with sample values:

<OBJECT id='rvocx' classid='clsid:CFCDAA03-8BE4-11cf-B84B-0020AFBBCCFA' width="400" height="300"> <param name='src' value="http://www.mysite.com/myvideofile.rm"> <param name='autostart' value="false"> <param name='controls' value="all"> <param name='console' value="video"> <EMBED src="http://www.mysite.com/myvideofile.rm" width="400" height="300" controls="all" type="audio/x-pn-realaudio-plugin" console="video" autostart="true"> </EMBED> </OBJECT>

The Real Media plugin can also reference .ram files, which are text files on your server that reference Real Media files. A .ram file can contain multiple .rm files, serve them as a playlist, and can help obfuscate the location of you original .rm media files, making it more difficult (but not impossible) to download them.

To create a .ram file:

1. Using a text editor (such as Notepad or SimpleText), create a text file containing the URL to each of your realaudio/video file. For example, the contents of your file should be in the following form:

http://www.your_domain.com/audioclip.ra

3. Save your text file using a .ram file extension.

4. In your HTML document, reference the .ram text file in a hyperlink. For example:

<A HREF="/audioclip.ram">
