Quickorder Module Overview

$(function(){ $(".Box").css("display","none"); }); The LexiConn Quickorder Module creates a form that allows multiple products to be added to the cart based upon SKU:

Entries in the add to cart form are checked against the active products in your store, and only valid products are added to the cart:

Or, for a one-step add-to-cart process, the confirmation table may be disabled, and invalid products will automatically be removed from the add to cart form while valid products are added directly to the cart.
The LexiConn Quickorder Module also features an configuration panel that makes it simple to set a custom style and layout for your Quickorder form (and Confirmation Table if selected):
