Using Checkbox Fields in a Formmail.php Form

$(function(){ $(".Box").css("display","none"); }); You can expand your formmail.php forms to use checkbox fields, as long as you follow the proper naming convention for the checkbox fields.

Here is a standard formmail example with a few checkbox fields added:

Name

Email

Where did you hear about us? Newspaper Ad
Television Ad
Web Site

Comments

Checkbox fields must have the square brackets ([]) after each of their names, otherwise only the value of the last checkbox field will be included in the form results.

Here is the code for this form:

```
<form action="#" method="post"> <input type="hidden" name="recipients" value="you@Your_Domain.com"> <input type="hidden" name="subject" value="Subject of email"> <input type="hidden" name="good_url" value="http://www.Your_Domain.com/thankyoupage.html"> <label for="name">Name</label> <input type="text" id="name" name="name"> <br /> <br /> <label for="email">Email</label> <input type="text" id="email" name="email"> <br /> <br /> <div>Where did you hear about us?</div> <hr> <input type="checkbox" name="ReferralSource[]" id="newspaper" value="Newspaper" /> <label for="newspaper">Newspaper Ad</label> <br /> <input type="checkbox" name="ReferralSource[]" id="television" value="Television" /> <label for="television">Television Ad</label> <br /> <input type="checkbox" name="ReferralSource[]" id="web" value="Website" /> <label for="web">Web Site</label> <br /> <br /> <label for="comments">Comments</label> <br /> <textarea id="comments" name="comments" cols="40" rows="10"></textarea><br> <input type="submit" name="submit" value="Submit"> </form>
```
