WordPress Plugin - How To Configure WP Updates Notifier

WP Updates Notifier
The WP Updates Notifier is a lightweight plugin that notifies WordPress administrators whenever an updated core program, plugin or theme is released. Keeping your WordPress platform up-to-date is your best defense against would-be hackers attempting to exploit vulnerable plugins/themes.
Plugin homepage: http://wordpress.org/plugins/wp-updates-notifier/
1. From the WordPress dashboard, navigate to Plugins > Installed Plugins.
2. Find WP Updates Notifier and click Activate.
3. Below are the configurable settings for this plugin. Below are the recommend settings. We highly suggest setting the frequency to 'Daily'. The plugin will only send a notification if a plugin or theme has an update pending.
