## formmail.cgi Gives Me An Error (Bad/No Recipient)

$(function(){ $(".Box").css("display","none"); }); This indicates that you are trying to send the email to an email address that is not located at your domain (ie something@aol.com). You have 2 choices to correct this problem:

1. Change the 'recipient' email address to an alias at your domain name (ie something@yourdomain.com which can be setup as an alias to another email account).

- or -

2. edit the script formmail.cgi and change the variable "@referers" to include the domain name you are trying to send the email to (ie aol.com). You can reference the script snippet below to find the "@referers" variable. If you are not comfortable editing a cgi script, email us and we can set the variable to its needed value for your script to work.

This new security measure has been installed to prevent outsiders from abusing the script to send unsolicited email (SPAM) through the formmail script.

```
#!/usr/bin/perl

Thompson Yezek # # http://www.securityfocus.com/archive/1/62033 # ##################################################################################### # Define Variables # # Detailed Information Found In README File. # # $mailprog defines the location of your sendmail program on your unix # # system. The flags -i and -t should be passed to sendmail in order to # # have it ignore single dots on a line and to read message for recipients # $mailprog = '/usr/lib/sendmail -i -t'; # @referers allows forms to be located only on servers which are defined # # in this field. This security fix from the last version which allowed # # anyone on any server to use your FormMail script on their web site. # # HERE IS THE VARIABLE YOU WILL NEED TO EDIT # @referers = ('www.yourdomain.com','yourdomain.com','something@aol.com'); # @recipients defines the e-mail addresses or domain names that e-mail can # # be sent to. This must be filled in correctly to prevent SPAM and allow # # valid addresses to receive e-mail. Read the documentation to find out how # # this variable works!!! It is EXTREMELY IMPORTANT. # @recipients = &fill_recipients(@referers);
```
